

## Mould Shop

Ultimate precision, uncompromising quality

50 years of experience in the field of moulding technology form our basis for the conception, engineering and production of series tools.

sauer product stands for mould and tool making. We have continually allowed for the enormous changes in the last decades. We not only take over the specified article data from the customer, but we test every application for feasibility and optimisation potential. Moulds and tools for the manufacture of suction tubes in lost core technology, 2K tools, gas and water injection tools, back injection moulding of materials and many more have given distinction to this profit centre.

Today for nearly all branches the focus is on the manufacture of 2K tools of technically as well as optically sophisticated parts. In addition, we produce complex moulds and tools for the production of technical parts which can be measured at our Germany location and as well suit our machinery from the processing point of view. All tools manufactured by sauer product are sampled on our own injection moulding machines through to the start of series production.

### We provide for you

- Blow moulding
- Injection moulding tools up to 12 tons
- 2K tools
- Transfer technology
- Rotary table technology
- Core back technology
- Sliding technology / traversing technology
- Gas injection technology (GIT)
- Water injection technology (WIT)
