

Injection Technology

Plastics in best shape

Sampling of tools, supporting start-up processes, supplying of zero and small series up to series production.

Since it was founded in 1998, sauer injection GmbH has completed the portfolio of sauer product. Machines with a closing force of 1,000 KN to 11,000 KN are available for sampling, pre-series and series production.

With the most modern injection technology, sauer injection GmbH manufactures thermoplastic products from single parts to components right through to complete systems for nearly all branches.

A 7,000 KN machine and an 11,000 KN machine are fitted with 2K rotary table technology. Injection compressing moulding as well as gas and water injection technology are also available.

We provide for you

- Samples
- Support with start-up processes
- Small series production
- Two-component technology
- Rotary table technology
- Injection compression moulding
- Gas injection technology (GIT)
- Water injection technology (WIT)
